

TRACK

FINTECH & FINANCIAL INCLUSION

IDEA NAME

TRUSTBRIDGE

Portable Credit / Financial Passport

Cross-Border Financial Transition Assistant

NRI Banking, Tax & Residency Guidance

India has far more digital financial activity than usable credit history 01

Bank accounts, digital payments, and remittances create evidence that a bureau-only decision can miss. Credit Passport turns permissioned records into a lender-readable evidence pack.

India private credit-bureau coverage, 2019¹

India account ownership²

55.9% bureau coverage¹

The largest private bureau covered 55.9% of India's adult population in the World Bank's 2019 profile.

78% owned an account²

India's adult account ownership rose from 35% in 2011 to 78% in 2021.

\$129 billion remitted³

India was the world's largest remittance recipient in 2024, based on the World Bank estimate.

80 million first-time payers⁴

More than 80 million Indian adults made a first digital merchant payment after the pandemic began.

India data: ¹ World Bank Doing Business 2019 · ² Global Findex 2021 · ³ World Bank remittance estimate (Dec 2024) · ⁴ World Bank Global Findex release

Payroll, rent, wallet, platform, and repayment records map to shared financial constructs. The same transaction scores once; matching records raise confidence.

Scored evidence

Payroll, gig earnings, mobile-money activity, rent and bills, PAYGo repayments, merchant sales, and verified remittance obligations.

Reliability evidence

A payroll record and matching deposit are reconciled as one income event. The match raises confidence. The event contributes once.

Policy-only evidence

Education, visa status, tax residency, forecasts, collateral, and guarantees feed eligibility checks and product terms. They stay outside the behavior score.

Signals rejected

Contacts, SMS surveillance, GPS, app installs, employer or school prestige, social popularity, and customer ratings stay outside the score.

Weights are assigned through one explicit rubric

Every domain is judged on the same six tests. The rubric sets a policy prior; repayment outcomes later fit, challenge, and validate the production weights.

Rubric used to rank each domain

POLICY PRIOR PRODUCED BY THE RUBRIC

Domain	Rubric tier	Base weight
Commitment performance	High	25%
Income continuity	High	20%
Affordability + capacity	High	20%
Liquidity	Medium	10%
Shock resilience	Medium	10%
Economic momentum	Medium	10%
Cross-border robustness	Low	5%

ILLUSTRATIVE POLICY PRIOR · TOTAL = 100%

1 · Define the outcome

Target 90+ days past due within 12 months, measured separately for each loan product. Freeze the target before fitting weights.

2 · Rank the construct

Research, lender judgement, and source tests produce a 1–5 score on each rubric dimension. Sources never receive weights directly.

3 · Fit incremental value

Start with cross-validated logistic regression. Compare a monotonic tree-based challenger and keep only stable lift over the simpler model.

4 · Apply constraints

Enforce direction, domain caps, fairness tests, reason-code stability, and a 100% total. Failed gates return the prior for review.

Credit cards, personal loans, and student loans use bounded weight overlays. Missing or weak cross-border evidence pulls a domain toward neutral and lowers reliability; it never reallocates the weight silently.

Product overlay	Missing evidence	Corridor adjustment	Copilot stays score-neutral
Credit cards emphasize payment and liquidity; personal loans emphasize capacity; student loans allow more observed economic momentum. Bands limit policy drift.	A missing domain is not redistributed to the others. Its score shrinks toward 50, and the separate reliability grade falls.	Coverage, source integrity, history length, and FX uncertainty change evidence reliability. Cross-border robustness stays capped at 5–10%.	NRE/NRO, FEMA, tax-residency, job-change, and return-home actions preserve evidence. Completing a checklist adds zero points.

Production weights follow a documented approval cycle

The rubric creates the first policy prior. Repayment outcomes then test predictive value, calibration, stability, fairness, and explanatory consistency before any weight changes.

WEIGHT APPROVAL CYCLE

RELEASE GATES

Test	What must hold before release
Predictive value	The candidate improves holdout discrimination over the approved baseline.
Calibration	Predicted risk bands remain close to observed default rates.
Stability	Weights and reason codes remain stable across time and corridor segments.
Fairness	Error rates and adverse impact receive review across relevant groups.
Explainability	Every reason maps to an economic event, formula, and evidence ID.
Data sufficiency	The sample and observation window meet the lender's approval standard.

Weights total 100%

Any increase requires an offset elsewhere. Weights always total 100%.

Changes stay bounded

Each domain may move by at most five points per release.

Missing data stays neutral

Absent evidence moves the domain toward 50 and lowers reliability. It cannot raise the score.

Every decision is versioned

The record stores inputs, weights, reliability, reasons, and the policy version.

One assistant follows the worker through four financial transitions

Each life event refreshes the banking, residency, tax, remittance and evidence checklist. The assistant explains the next action and routes execution to the responsible institution.

Banking, FEMA and tax status are evaluated separately

The same person can have different classifications under FEMA, tax law and bank-product rules. The platform keeps those tracks separate and produces conditional guidance rather than a single NRI label.

THREE INDEPENDENT STATUS TRACKS

- 01

FEMA residence
Determines whether the person is resident in India or resident outside India for foreign-exchange rules.
Inputs: purpose of departure, intended stay, return circumstances and current facts
- 02

Tax residence
Determined for each tax year from day counts and applicable statutory conditions.
Inputs: India stay calendar, prior-year history and relevant income facts
- 03

Account status
Each account must match the holder's status and the account's permitted purpose.
Inputs: account inventory, source of funds, currency, tenure and bank records

HOW THE GUIDANCE IS PRODUCED

ACCOUNT GUIDANCE MATRIX

Account	Typical role while non-resident	Return or status-change prompt
NRE	Rupee account for eligible funds from outside India and permitted credits	Review immediately. Bank may redesignate it as a resident account or transfer eligible funds to RFC
NRO	Rupee account often used for permitted India-source receipts and redesignated resident accounts	Review continuing India income, tax documentation and repatriation requirements with the bank
FCNR(B)	Foreign-currency term deposit for eligible non-resident depositors	Bank confirms treatment after return and at maturity based on account terms and status
RFC	Resident foreign-currency account for eligible returning residents	Assess eligibility and which foreign-currency balances can move into the account

The account name alone does not determine tax treatment. The platform shows conditions, effective date, source and escalation path.

Raj's five-year India-Saudi journey produces one continuous record

08

Illustrative case: Raj is an Indian construction worker, sends money to his family each month and returns permanently after five years. The platform updates the plan whenever his circumstances change.

The product coordinates the journey while institutions retain authority

09

TrustBridge prepares facts, explains approved rules and manages the checklist. Banks, lenders and qualified professionals execute regulated actions and make final decisions.

RESPONSIBILITY BOUNDARY				WHO BUYS IT	
Activity	User	TrustBridge	Bank or professional	Bank NRI acquisition, prepared handoffs and customer retention	
Provide facts and consent	Confirms purpose and data access	Records scope, expiry and revocation	Receives only approved fields	Employer or recruiter Relocation support and lower HR service burden	
Generate transition checklist	Answers missing questions	Applies versioned rules and priorities	Reviews exceptions when required	Remittance or fintech Deeper engagement around the transfer journey	
Change or redesignate account	Submits requested documents	Prepares the handoff	Bank verifies and executes	Insurer or wealth firm Timely reviews after income and residency events	
Determine tax treatment	Provides day-count and income facts	Shows conditions and source links	Qualified professional resolves complexity		
Make a credit decision	Applies and reviews explanation	Shares consented evidence	Lender sets eligibility and pricing		
Hold funds or credentials	Keeps PIN, OTP and passwords private	Never stores sensitive credentials or moves money	Regulated institution safeguards the account		

PILOT OPERATING MODEL			
Distribution Bank, employer or remittance partner embeds the journey	Commercial model Annual licence plus per active journey or API usage	Pilot measures Checklist completion, time to handoff, evidence coverage and correction rate	Safety measures Consent withdrawals, escalations, rule exceptions and fairness review
